

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-001	Functional	The system shall let students use 100 credits to bid for their preferred electives and check their prerequisites.	High	Pass: 100 credits are correctly used and prerequisites are checked. Fail: More than 100 credits are accepted or prerequisites are ignored.	Makes sure students follow the bidding rules.
FR-002	Functional	The system shall let students see the available electives before bidding.	High	Pass: Students can see the available electives and their details. Fail: Some available electives are not shown.	Students need to know what courses they can choose.
FR-003	Functional	The system shall check if the student's selected electives have timetable clashes.	High	Pass: Timetable clashes are shown to the student. Fail: Two courses with the same time are accepted.	Prevents students from getting courses at the same time.
FR-004	Functional	The system shall process the bids and assign electives based on the given rules.	High	Pass: Valid bids are processed and electives are assigned correctly. Fail: Invalid bids are included.	This is the main job of the system.
FR-005	Functional	The system shall let students see the electives they have been assigned.	Medium	Pass: The student's final electives are displayed correctly. Fail: The result is missing or incorrect.	Students need to know their final electives.

NFR-001	Nonfunctional	The system shall process 5,000 student bids and solve timetable conflicts in less than 30 seconds.	High	Pass: The process finishes within 30 seconds. Fail: It takes more than 30 seconds.	Makes sure the system is fast enough.
NFR-002	Nonfunctional	The system shall keep student bidding and allocation details safe from unauthorized users.	High	Pass: Only authorized users can see the information. Fail: Unauthorized users can access it.	Keeps student information safe.
